

# SmartCon Solutions partners with WiSuite and Axxess Industries to integrate guestroom controls for San Francisco's Hotel Nikko Renovation

*August 21, 2018 – East Hartford* - When Hotel Nikko San Francisco opened in 1987 it represented the most advanced technological and architectural Hotel design available at the time, and with that same goal in mind, Takenaka Corporation has closed the Hotel for the first time in its 30-year history to complete a \$60 Million renovation creating completely reimagined experiences for Hotel Nikko San Francisco's guests.

Spearheaded by Hirsch Bedner Associates, the renovation will encompass guestrooms, the lobby, public spaces, third floor ballroom and pre-function space, as well as a significant upgrade to the technology and infrastructure of the hotel. As one of only five hotels in San Francisco to be recognized as a Forbes Travel Guide Four-Star Hotel, Hotel Nikko San Francisco will emerge from the renovation to create a completely reimagined and elevated hotel guest experience.

SmartCon Solutions will be integrating Axxess wireless in-room switches which indicate privacy and make-up-room requests and a corridor doorbell with LED indicator. This integration will also be a networked solution that will include the Axxess Tray Tracker technology, which monitors trays and tables and signals housekeeping when they are placed in the corridor to be picked up.

In collaboration with John Gallant, President and CEO of WiSuite, there will be an additional integration with their energy efficient, networked thermostat.

Post implementation, SmartCon Solutions will continue to support the property with their SmartCare Service Partnership plan. The SmartCare plan features a remote, proactive system monitoring approach. The SmartCare plan also offers vital cost saving analytics and 24/7 technical support, all of which results in system optimization throughout the life of the equipment and an expedited, realized return on investment (ROI).

## **About SmartCon Solutions**

SmartCon serves the Hospitality, Healthcare, Student Housing, Multi-Dwelling, Commercial and Industrial building markets by designing objective recommendations for energy management systems, lighting control, mobile device integration, network applications, BMS Predictive Energy Optimization, and other property enhancements.
